PALTURAI MyPLATFORM FOR SAP

All features at a glance (1/2)

Company Profile

Comprehensive 360° view of companies with up to 11 information categories.
In addition to basic details on master data, network relationships and risk information are displayed in clear tables, charts and geomaps.

Person Profile

Profile view for people with up to 5 information categories.
In addition to details on career development, investments and network risks, contact network information in particular is displayed in clearly arranged tables with helpful filters and navigation options.

Network

Visualization of P2C and C2C connections as a network.
In clear graphs both current and historical relationships are displayed, such as decision, control and supervisory functions or shareholdings, contracts and economic authorizations.

Structure

Visualization of ownership relationships as tree diagrams.
Direct shareholdings in or from other companies are displayed as hierarchical shareholder structures, which can be further expanded by double-clicking on selected nodes.

Ultimate Beneficial Owner

Tree diagrams with marked UBO persons and paths.
Economically entitled persons are highlighted as colored nodes in the shareholder structures. The path of the participation(s), possibly across several levels, is also visible in the hierarchical shareholder structure. Controlled and direct shares (in %) are shown.

Shortest Path

Variants of shortest contact paths to targets.
Intelligent rule sets use your personal contacts and network relationships to determine the shortest contact paths to target customers. These rules have a maximum of four levels and are displayed in all available path alternatives.

Monitoring Service

Push message service to subscribed business partners.
Important business events are immediately delivered to the SAP Notification Centre. These include changes in management, shareholders, master data or company status'.

Master Data Management

Functions for creating, updating or matching business partners.
Business partners are newly created, updated or matched in an automated, cost-saving and reliable process. Intelligent workflows prevent the creation of duplicates.

Search

Targeted search for companies and persons
Numerous search filters and user-friendly help functions support both the targeted search for companies and persons and the creation of individual selections, e.g. lead lists.

Tagging

Customized marking of business partners.
The colored markings of important business partners (e.g. customers, suppliers, leads or "trouble makers") make the various graphs and tables more informative and clearer. On the other hand, tags support our algorithms, such as the Shortest Path.
